

Be BioPharma

Case Study

AIS

Industry:	Pharmaceutical	Number of stations:	80
Location:	Cambridge, MA	Project Date:	December 2021

Company Overview & Project Needs

Be Bio is a leader in developing engineered B cells as a new category of cellular medicines. B cells are one of the most unique and versatile populations of cells in the body, playing a key role in humoral immunity and in modulating immune cell behavior in tumors and chronically inflamed tissues.

This fast growing company wanted to create a space that was both flexible and functional. The aesthetic of the office needed to complement the look and feel of the lab; which is visible from the office space. Open offices were requested to be small in order to fit as many employees into the space as possible in anticipation of future growth.

The Results

Be Bio contacted AIS after a referral from MassBio, which recently used AIS to furnish their offices. Because the needs were similar, Be Bio and the local design firm, OPM, worked with AIS designers to plan the offices.

The open offices used Divi powered panels along the spine with 8" glass screens coupled with writable gallery panels to give a dual purpose to the division of space. E Series height adjustable tables were specified to give users movement options within the small 3 x 5' working space. While file storage wasn't a need, personal storage was. Calibrate Storage is integrated into each station for personal items with a cushion top for side seating when needed.

AIS Solutions

- Divi Panel System
- Gallery Panels in Frosty White
- E Series Height Adjustable Tables
- Calibrate Series Storage
- Natick Task Seating
- Calibrate Private Office (not shown)
